

RAG DATA DICTIONARY & SCHEMA DOCUMENTATION

Target Target Audience: Internal AI Engineers & Systems Claim Handlers | Linked Master Framework: PA300CA (01/25)

Field Name	Data Type	Adjudication Mapping & Pipeline Description
Policy Number	Text (String)	Unique alpha-numeric structural tracking key assigned to each customer account profile (e.g., MAPFRE-CA-10001). Actively used as a hard primary key metadata filter inside vector searches to isolate exact account text scopes.
Status	Text (Enum)	Specifies the current operational deployment lifecycle of the policy ('Active' or 'Inactive'). The RAG orchestration script evaluates this boundary state immediately upon query ingestion to trigger automated coverage refusal patterns.
Year	Integer (Numeric)	The manufacture model year of the scheduled asset. Injected into the prompt parameters to help the LLM automatically evaluate Part D Depreciation, Betterment, and Custom Equipment thresholds governed by vehicle age limits.
Vehicle Details	Text (String)	A unified physical property descriptor string capturing the Year, Make, Model, and Body Style type of the insured auto. Used by the adjudication loop to evaluate statutory classifications (such as Gross Vehicle Weight limits).
Liability Limits	Text (String)	The explicit multi-tier financial liability ceilings purchased for Part A protection (e.g., 30k/60k/15k California standard statutory baseline bounds or upgraded coverage limits up to 100k/300k/50k premium brackets).
Med Pay	Text (String)	Captures the operational limit allocations or status parameters of Part B Medical Payments Coverage. Explicitly registers as either a fixed numeric payment parameter ceiling (e.g., \$5,000 Per Person) or 'Not Purchased'.
Comp Ded	Text (String)	The defined out-of-pocket financial deductible ceiling applied to sudden, direct, and accidental comprehensive losses under Part D (e.g., missile impacts, flood, fire, theft, windshield glass cracks, or contact with birds/animals).
Coll Ded	Text (String)	The explicit physical structural deductible liability bound applied to accidental collision losses resulting from direct impact with another vehicle or physical object, or the sudden dynamic upset of the scheduled auto.
Uninsured Motorist Waiver	Integer (Binary)	A strict true/false boolean flag variable (1 = Active, 0 = Inactive) indicating purchase of the Part D deductible waiver. Controls whether the system waives the customer collision deductible during an uninsured motorist accident.
Rental Reimbursement	Integer (Binary)	A relational structural indicator flag (1 = Active, 0 = Inactive) checking for the premium temporary transportation rider package on Page 22. Dictates whether the search spaces slice out Page 22 text blocks for context injection.
Loan Lease Payoff	Integer (Binary)	A logical relational boundary tag (1 = Active, 0 = Inactive) indicating active financial gap protection. Commands the LLM framework to compute precise valuation differences during a vehicle total loss settlement sequence.

Field Name	Data Type	Adjudication Mapping & Pipeline Description
Custom Equipment	Integer (Binary)	A clear binary compliance flag variable (1 = Active, 0 = Inactive) regulating additional coverage for permanently attached enhancements. Dictates whether the search engine applies the standard \$1,000 threshold restriction.
